MM54C173/MM74C173 TRI-STATE® Quad D Flip-Flop

General Description

The MM54C173/MM74C173 TRI-STATE quad D flip-flop is a monolithic complementary MOS (CMOS) integrated circuit constructed with N- and P-channel enhancement transistors. The four D-type flip-flops operate synchronously from a common clock. The TRI-STATE output allows the device to be used in bus-organized systems.

The outputs are placed in the TRI-STATE mode when either of the two output disable pins are in the logic "1" level. The input disable allows the flip-flops to remain in their present states without disrupting the clock. If either of the two input disables are taken to a logic "1" level, the Q outputs are fed back to the inputs and in this manner the flip-flops do not change state.

Clearing is enabled by taking the input to a logic "1" level. Clocking occurs on the positive-going transition.

Features

- Supply voltage range
- 3V to 15V
- Tenth power TTL compatible
- Drive 2 LPTTL loads 0.45 V_{CC} (typ.)
- High noise immunity
- Low power
- Medium speed operation
- High impedance TRI-STATE
- Input disable without gating the clock

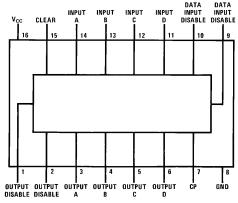

Applications

- Automotive
- Data terminals
- Instrumentation
- Medical electronics
- Alarm systems
- Industrial electronics
- Remote metering
- Computers

TL/F/5898-2

C _{IN}	Input Capacitance	(Note 2)		5		pF
C _{PD}	Power Dissipation Capacitance	(Note 3)				

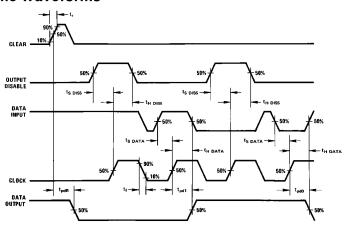

^{*}AC Parameters are guaranteed by DC correlated testing.

Note 1: "Absolute Maximum Ratings" are those values beyond which the safety of the device cannot be guarantee.d Except for "Operating Temperature Range" they are not meant to imply that the devices should be operated at these limits. The table of "Electrical Characteristics" provides conditions for actual device operation.

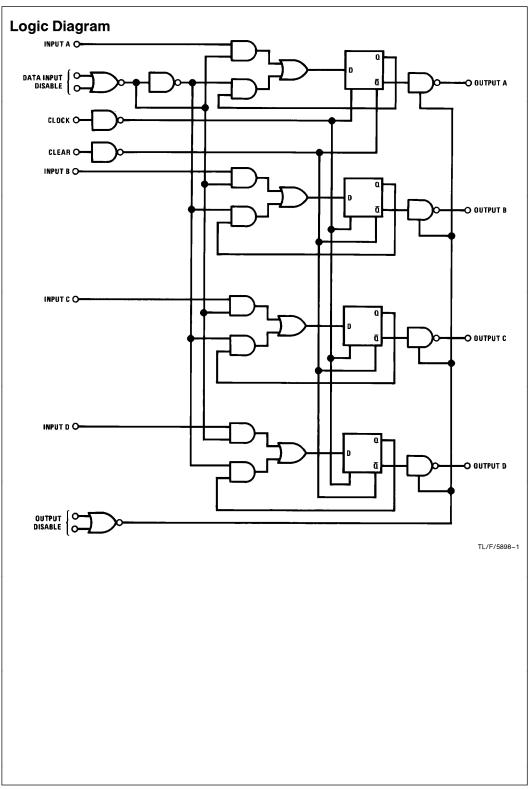

Note 2: Capacitance is guaranteed by periodic testing.

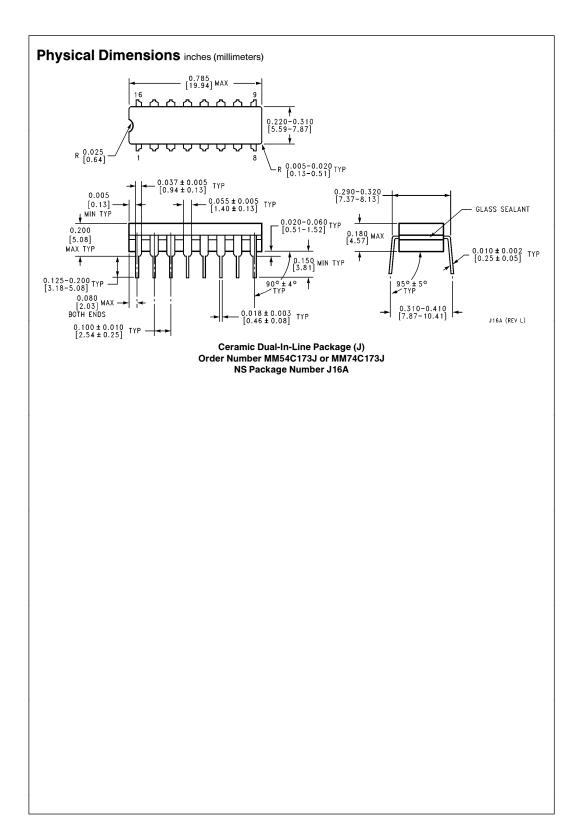

Note 3: C_{PD} determines the no load AC power consumption of any CMOS device. For complete explanation see 54C/74C Family Characteristics application note AN-90.

LIFE SUPPORT POLICY

NATIONAL'S PRODUCTS ARE NOT AUTHORIZED FOR USE AS CRITICAL COMPONENTS IN LIFE SUPPORT DEVICES OR SYSTEMS WITHOUT THE EXPRESS WRITTEN APPROVAL OF THE PRESIDENT OF NATIONAL SEMICONDUCTOR CORPORATION. As used herein:

- 1. Life support devices or systems are devices or systems which, (a) are intended for surgical implant into the body, or (b) support or sustain life, and whose failure to perform, when properly used in accordance with instructions for use provided in the labeling, can be reasonably expected to result in a significant injury to the user.
- A critical component is any component of a life support device or system whose failure to perform can be reasonably expected to cause the failure of the life support device or system, or to affect its safety or effectiveness.
