2 x 22 W BTL stereo car radio power amplifier with loudspeaker protection

TDA1553Q

GENERAL DESCRIPTION

The TDA1553Q is an integrated class-B output amplifier in a 13-lead single-in-line (SIL) plastic power package. The circuit contains 2 x 22 W amplifiers in Bridge Tied Load (BTL) configuration. The device is primarily developed for car radio applications.

Features

- Requires very few external components
- High output power
- Low offset voltage at outputs
- Fixed gain
- Good ripple rejection
- Mute/stand-by switch
- Load dump protection
- AC and DC short-circuit-safe to ground and V_P
- Loudspeaker protection (LSP)
- Thermally protected
- Reverse polarity safe
- Capability to handle high energy on outputs ($V_P = 0$ V)
- Protected against electrostatic discharge
- No switch-on/switch-off plop
- Low thermal resistance
- Flexible leads

QUICK REFERENCE DATA

PARAMETER	CONDITIONS	SYMBOL	MIN.	TYP.	MAX.	UNIT
Supply voltage range						
operating		V_P	6.0	14.4	18.0	V
non-operating		V_P	–	–	30	V
load dump protected		V_P	–	–	45	V
Repetitive peak output current		I_{ORM}	–	–	4	A
Total quiescent current		I_{tot}	–	80	160	mA
Stand-by current		I_{sb}	–	0.1	100	μ A
Switch-on current		I_{sw}	–	–	60	μ A
Input impedance		$ Z_i $	50	60	75	k Ω
Junction temperature		T_j	–	–	150	$^{\circ}$ C
Stereo application						
Output power	$R_L = 4 \Omega$; THD = 10%	P_o	20	22	–	W
Supply voltage ripple rejection	$R_S = 0 \Omega$ $f = 100$ Hz to 10 kHz	RR	48	–	–	dB
DC output offset voltage		$ \Delta V_O $	–	–	150	mV
Channel separation		α	40	–	–	dB
Channel unbalance		$ \Delta G_V $	–	–	1	dB

PACKAGE OUTLINE

6	OUT1B	output 1B	13	IP2	input 2
7	OUT2A	output 2A			

FUNCTIONAL DESCRIPTION

The TDA1553Q contains two identical amplifiers with differential input stages and can be used for bridge applications. The gain of each amplifier is fixed at 26 dB. Special features of this device are:

Mute/stand-by switch

- low stand-by current (< 100 μ A)
- low mute/stand-by switching current (low cost supply switch)
- mute facility.

Loudspeaker protection

When a short-circuit to ground is made, which forces a DC voltage across the loudspeaker of ≥ 1 V, a built-in protection circuit becomes active and limits the DC voltage across the loudspeaker to ≤ 1 V. The delay time of the protection circuit can be controlled by an external capacitor connected to pin 12.

RATINGS

Limiting values in accordance with the Absolute Maximum System (IEC 134)

PARAMETER	CONDITIONS	SYMBOL	MIN.	MAX.	UNIT
Supply voltage					
operating		V _P	–	18	V
non-operating		V _P	–	30	V
load dump protected	during 50 ms; t _r \geq 2.5 ms	V _P	–	45	V
Non-repetitive peak output current		I _{OSM}	–	6	A
Repetitive peak output current		I _{ORM}	–	4	A
Storage temperature range		T _{stg}	–55	+ 150	$^{\circ}$ C
Junction temperature		T _j	–	150	$^{\circ}$ C
AC and DC short-circuit-safe voltage		V _{PSC}	–	18	V

Noise output voltage (RMS value)							
	ON	$R_S = 0 \Omega$; note 8	$V_{\text{no(rms)}}$	–	70	120	μV
	ON	$R_S = 10 \text{ k}\Omega$; note 8	$V_{\text{no(rms)}}$	–	100	–	μV
	mute	notes 8, 9	$V_{\text{no(rms)}}$	–	60	–	μV
Channel separation		α	40	–	–	dB	
Channel unbalance		$ \Delta G_V $	–	–	1	dB	

Notes to the characteristics

- The circuit is DC adjusted at $V_P = 6 \text{ V}$ to 18 V and AC operating at $V_P = 8.5 \text{ V}$ to 18 V .
- At $18 \text{ V} < V_P < 30 \text{ V}$ the DC output voltage $\leq V_P/2$.
- Conditions:
 - $V_{11} = 0 \text{ V}$
 - short-circuit to GND
 - switch V_{11} to MUTE or ON condition (rise time $\geq 10 \mu\text{s}$).
- Frequency response externally fixed.
- Ripple rejection measured at the output with a source impedance of 0Ω (maximum ripple amplitude of 2 V).
- Frequency $f = 100 \text{ Hz}$.
- Frequency between 1 kHz and 10 kHz .
- Noise voltage measured in a bandwidth of 20 Hz to 20 kHz .
- Noise output voltage independent of R_S ($V_1 = 0 \text{ V}$).

SOLDERING

Introduction

There is no soldering method that is ideal for all IC packages. Wave soldering is often preferred when through-hole and surface mounted components are mixed on one printed-circuit board. However, wave soldering is not always suitable for surface mounted ICs, or for printed-circuits with high population densities. In these situations reflow soldering is often used.

This text gives a very brief insight to a complex technology. A more in-depth account of soldering ICs can be found in our "IC Package Databook" (order code 9398 652 90011).

Soldering by dipping or by wave

The maximum permissible temperature of the solder is 260 °C; solder at this temperature must not be in contact with the joint for more than 5 seconds. The total contact time of successive solder waves must not exceed 5 seconds.

The device may be mounted up to the seating plane, but the temperature of the plastic body must not exceed the specified maximum storage temperature ($T_{stg\ max}$). If the printed-circuit board has been pre-heated, forced cooling may be necessary immediately after soldering to keep the temperature within the permissible limit.

Repairing soldered joints

Apply a low voltage soldering iron (less than 24 V) to the lead(s) of the package, below the seating plane or not more than 2 mm above it. If the temperature of the soldering iron bit is less than 300 °C it may remain in contact for up to 10 seconds. If the bit temperature is between 300 and 400 °C, contact may be up to 5 seconds.

DEFINITIONS

Data sheet status	
Objective specification	This data sheet contains target or goal specifications for product development.
Preliminary specification	This data sheet contains preliminary data; supplementary data may be published later.
Product specification	This data sheet contains final product specifications.
Limiting values	
Limiting values given are in accordance with the Absolute Maximum Rating System (IEC 134). Stress above one or more of the limiting values may cause permanent damage to the device. These are stress ratings only and operation of the device at these or at any other conditions above those given in the Characteristics sections of the specification is not implied. Exposure to limiting values for extended periods may affect device reliability.	
Application information	
Where application information is given, it is advisory and does not form part of the specification.	

LIFE SUPPORT APPLICATIONS

These products are not designed for use in life support appliances, devices, or systems where malfunction of these products can reasonably be expected to result in personal injury. Philips customers using or selling these products for use in such applications do so at their own risk and agree to fully indemnify Philips for any damages resulting from such improper use or sale.
